

## Team name: Fantasy Fanatics

Team: Quang Tran, Alphonso Mckenzie, Foram Kalaria

Our application called “Freestyle” is an NBA fantasy team builder application. Freestyle will ask the user to create an account that we will store their team and user information into our database. Once a user creates an account and has logged in, they will be able to manage and create their “Dream Team” or possible fantasy team. The user can create a team by looking through a list of all of the players currently in the NBA. The user can also manage their current team from the starting players to their bench players. The user can categorize their search of NBA players by looking up a certain position or team. The user will have the ability to create multiple teams, name each team, as well as the ability to modify the players on each team the user creates.

Freestyle also has the ability to preview previous games from the past. The records will be displayed in an interface for the user to be able to navigate and search through. The user will have some way to save their information (dream team) and share it with others. Freestyle will allow you to simulate a match against 2 of your teams.

### Advanced Features:

- JSON for all the NBA players (Team, name, position, etc...)
- Using a basketball api to grab all the information and showing on different activity
- Simulate matches against 2 of your dream teams
- Adding/editing your teams
